

Ensure your environmental requirements through your supply chain

material.one standardizes the digital exchange of data in the circular economy

Benefit from the digital replica of your supply chain

Ever more data from the supply chain is required

To meet the increasing requirements of legislators and the growing interest in sustainable products, companies are faced with the challenge of obtaining data ever faster, in greater detail and earlier in the process.

Prepared today for the requirements of tomorrow

material.one is the digital standard for data exchange. We enable direct access to data from your supply chain. This enables you to respond to new requirements now and in the future - whatever they may be.

Recyclate percentage

Compliance with social standards

Certificates

Requirements under the Supply Chain Act

CO2 Footprint

Sampling

Digitization means so much more than just supplying data

As a multi-enterprise supply chain business network, material.one is able to provide unique insight into environmental metrics as well as material data and product data from your supply chain. Gain access to this valuable resource and combine it with data from the development phase all the way to feedback from the field. This gives you a tool to intelligently optimize requirements and comply with new standards.
